AB	Compds. and methods are provided for the prepn. of a red blood cell compn. which has significantly reduced antigenicity and in which any possible pathogen contaminants have been substantially inactivated. The red blood cell compns. are of particular use for introduction into an individual in cases where the potential for an immune reaction is high, for example in alloimmunized blood recipients or in trauma situations where the possibility of transfusion of a mismatched unit of blood is higher. The red blood cell compns. of this invention provide a much lower risk of transfusion assocd. disease transmission as well as a much lower risk of a transfusion assocd. immune reaction.
